UX AUDIT · SAMPLE

What an audit actually says.

An audit is the fastest way to start. This is the shape of one: a review of Clash Royale's interface, written as a teaching example.

Clash Royale is a trademark of Supercell. Independent commentary, not commissioned.

7 things that work

01 **Balanced, symmetrical layout**

Secondary buttons sit at the edges. The action button stays front and centre.

02 **Easy flow**

The main icons stay along the bottom on every screen. Nothing jumps around.

03 **Hierarchy through scale and colour**

Header, player info, chests and the action button each read at their own level.

04 **Buttons where players expect them**

Close and Back keep the positions players already know.

05 **Consistent UI art**

Buttons are distinct by shape, size and style for each level.

06 **Polish**

Feedback on everything: animation, gleams and response to touch.

07 **A tutorial that shows, not tells**

Simple, clear and quick. It never feels like work.

3 potential problems

01

Room to grow

The navigation is limited to five features. Adding a sixth will force a structural decision.

02

Popups over popups

Usually a mistake. Here it is one level deep, a confirmation, and always returns to the previous screen, so it holds.

03

Colour coding collision

The level droplet uses the same colour as epic cards, which muddies what that colour means.
